Problem Statement:

In Malaysia, the current bus booking systems face numerous challenges that make the process inconvenient and inefficient for passengers and operators alike. For passengers, navigating the booking platforms proves difficult due to their complex interfaces and lack of essential features. This complexity often leads to frustration as users struggle to find and book suitable trips. Additionally, the absence of real-time updates on seat availability and trip status further exacerbates the problem, making it hard for passengers to make informed decisions.

On the other hand, bus operators grapple with manual trip management processes that are labor-intensive and error-prone. Tasks such as adding, cancelling, and modifying trips, as well as allocating seats and scheduling, are often done manually, consuming valuable time and resources. Furthermore, the current systems lack adequate security measures to protect user data, leaving sensitive information vulnerable to unauthorized access and potential breaches.

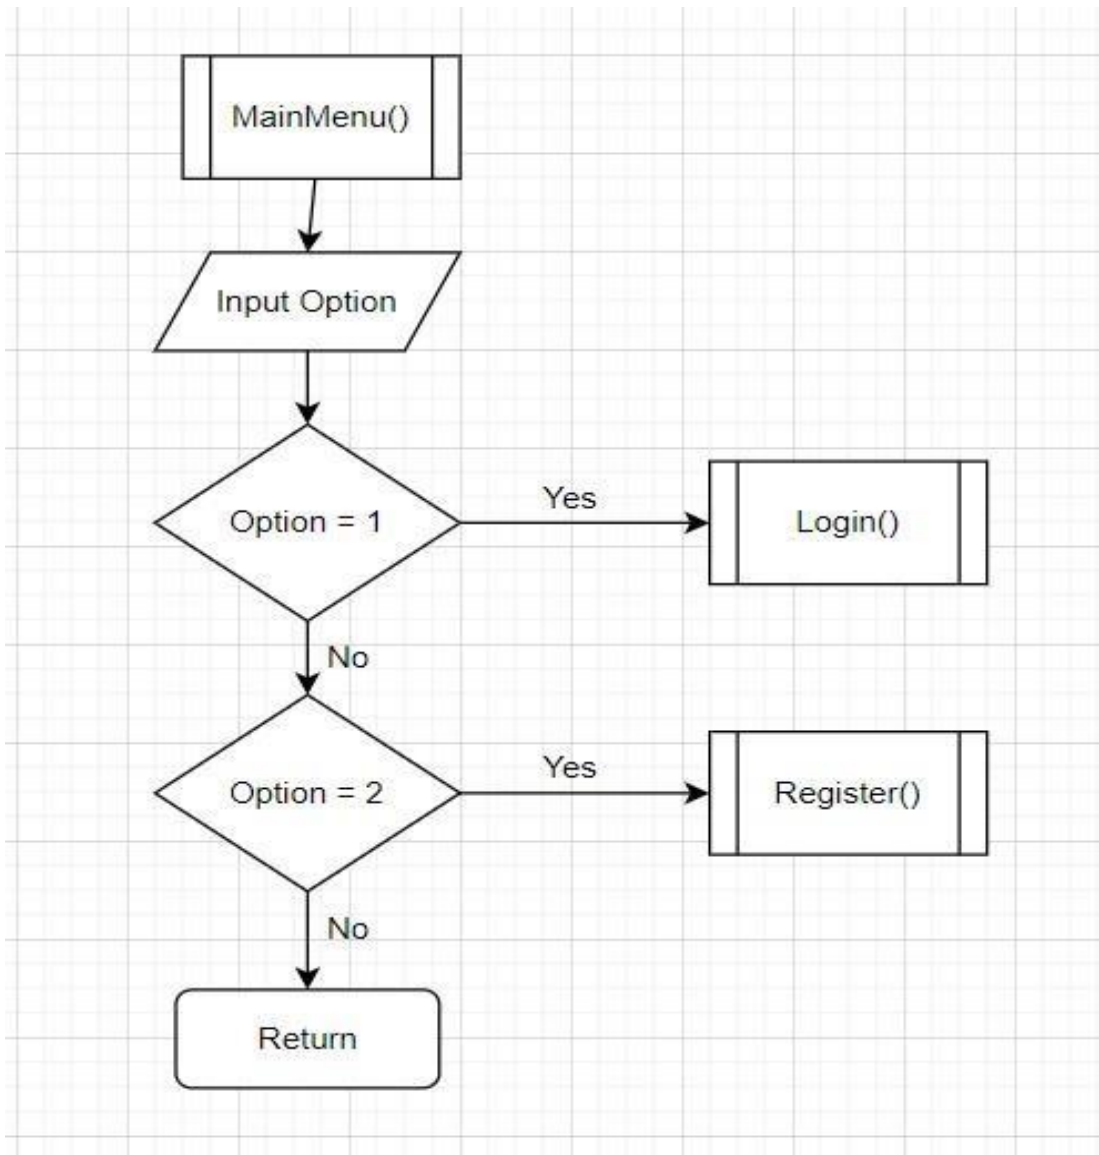

These challenges collectively hinder the smooth operation of the transportation sector in Malaysia, impacting user satisfaction and operational efficiency. There is a clear need for a new bus booking system that addresses these issues comprehensively. Such a system should provide passengers with a user-friendly interface, real-time updates on trip availability, and robust security measures. For operators, it should offer automated tools for trip management and data protection. By addressing these challenges, we can significantly improve the travel experience for both passengers and operators in Malaysia.

Booking:

Business Rule:

- Customers:
 - A customer can only have one booking at a time.
 - A customer can make multiple payments.
- Staff:
 - A staff member managed by an admin.
- Admin:
 - An admin can manage many staff members.
- Trips:
 - A trip can only have one bus assigned to it.
 - A trip must have a driver.
 - A trip can have many bookings.
- Bus:
 - A bus can take multiple trips.
- Bookings:
 - A booking can only be for one trip.
 - A booking can only be made by one customer.
 - A booking must have a seat number assigned.
- Payments:
 - A payment can only be for one booking.
- Driver:
 - A driver can drive many trips.

Read user choice (option)

Case option:

- "Register User": Call registerUser()
- "Login User": Call loginUser()
- If login successful:
 - Set logged_in_customer_id (if applicable)
 - Show customer menu or admin menu based on user role
- Else:
 - Display error message and return to main menu
- "View Trips": Call viewTrips()

- *"Book Trip":*
 - *Prompt for trip ID*
 - *Call bookTrip(trip_id)*
 - *Display success or error message*
- *"Cancel Booking":*
 - *If customer is logged in:*
 - *Call viewCustomerBookings(logged_in_customer_id) to display bookable options*
 - *Prompt for booking ID*
 - *Call cancelBooking(booking_id)*
 - *Display success or error message*
- *"View Bookings":*
 - *If customer is logged in:*
 - *Call viewCustomerBookings(logged_in_customer_id)*
 - *Else:*
 - *Display message "Please login to view bookings"*
- *"Add Trip", "Update Trip", "Delete Trip", "Add Staff", "Update Staff", "Delete Staff", "Add Bus", "Update Bus", "Delete Bus", "Add Driver", "Update Driver", "Delete Driver":*
 - *Only allow if user is logged in as Admin*
 - *Call corresponding function with appropriate parameters*
 - *Display success or error message*
- *"Generate Report":*
 - *Only allow if user is logged in as Admin*
 - *Prompt for report type ("Daily", "Monthly", or "Yearly")*
 - *Call generateReport(type)*
 - *Display report*
- *"Exit": Exit Loop*
